MODEL : 109V
 Chromed Steel

MODEL : 109AV
 Chromed Steel, Reflectors

All rear bumpers are made by deep drawing technology in steel fabrication. For the chromed steel rear bumper, triple plating is the process that we use to create mirror finished on the bumpers with durability and rust proof warrantee for 6 months. However, If rusting is major problem caused by environmental toughness, choose the available stainless steel model to solve that problem, or powder coated steel for more economy price. Rust proof warrantee would be up to 3 years for both stainless steel and powder coated steel version. Further more, to ensure fitting perfection, all brackets for rear bumpers are made by stamping process then powder coated for more durability and rust proof.
